

# BRM SERIES

## Industrial Washdown Infrared Heater

# RADIANT HEATERS

2.0 kW Fixed\*

4.5 kW Fixed\*

6.0 kW Fixed\*

13.5 kW Fixed with Grille\*

### Technical Specifications:

**Element Type:** Metal Sheath  
**Reflection Angles:** 90° Sym.

### Ideal Spaces:

Wastewater Treatment Plants  
Loading Docks  
Foundries  
Auto or Marine Repair Facilities  
Walkways & Assembly Areas  
Enclosed Smoking Areas  
Indoor Storage Areas  
Covered Outdoor Storage Areas

Extruded Aluminum

- › Ideal for permanent supplemental, spot heating where dependence on air movement is impractical
- › High-watt density and industrial design provides a durable source of heat
- › Units are rated to be permanently mounted in the horizontal position
- › Heavy-duty U-Bend element
- › Electric heaters convert energy to heat at 100% efficiency
- › Optional safety grilles are available
- › Heater has sealed wiring compartment that allows units for washdown

Must be installed at at 90° symmetrical reflective angle.

NOTE: Metal sheathed to be used indoors or outdoors in high-traffic areas. Maintain at least 5 ft. in radiant path, between bottom of heater and combustible material. Pigtail element leads for a more positive connection in high-traffic areas where physical abuse.

\* Product images are shown at an angle for display purposes only and cannot be installed in this manner.

NOTE: Metal Sheathed: used indoors in high-traffic areas. Maintain at least 5 ft. in radiant path, between bottom of heater and combustible material. Pigtail element leads for a more positive connection in high-traffic areas where physical abuse. See following page for infrared accessories. Ground Fault Detection: Ground fault detection equipment is designed to monitor for any gradual changes in the insulation level due to humidity or mechanical damage as it develops, thus, de-energizing the load to prevent arcing type faults, preventing premature element failure and potential fire damage. As a safety precaution it is highly recommended that industrial infrared heaters must be protected by ground fault detection. Failure to comply could result in a building fire or serious equipment damage.
