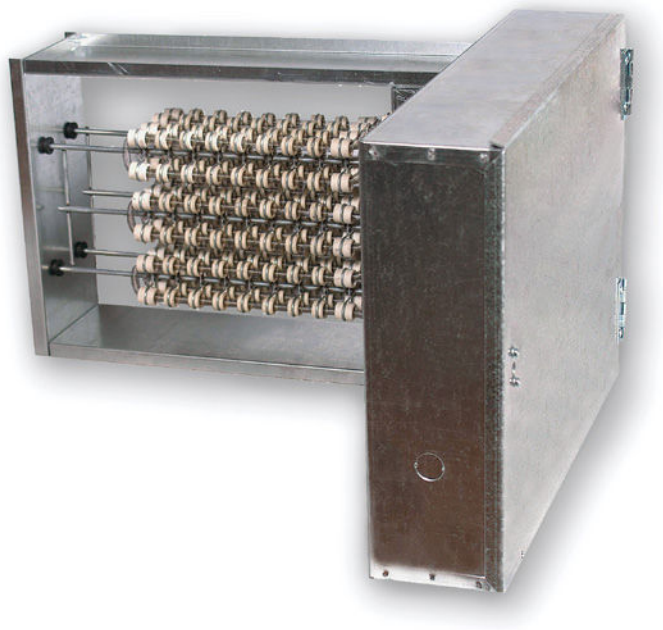
OPEN COIL ELECTRIC
Duct Heater



Ideal Spaces:

Office Buildings
Retail Stores
Warehouses
Schools
Hotels
Hospitals

Stainless Steel

Key Features

- UL and ETL Listed for use as a standalone heater
- Flip-Able design, airflow in any direction, designed for zero clearance
- Standard Watt density of 30 kW/sqft
- Derated Heating Coils improve heater element life and nuisance tripping
- Max width of 24" and max height of 18"
- Variable CFM requirement based on inlet air temp
- Convenient online quoting through updated Configurator; saves time and money

Options & Accessories

- Precise solid state SSR/SCR Control
- NEC compliant Disconnect Switch
- Integrated 24V Transformer eliminates control wire runs
- Airflow Switch is an air pressure device designed to disable the heater when the system has no or low airflow
- Wall Thermostat for easy room temperature control

How to Order an Open Coil Electric Duct Heater

In almost every application, a duct heater needs to be highly configured and specialized to meet the demand of the space it is going in. To do this efficiently, we have created a new configuration process making it fast and easy to get the product you need. This page is designed to show you all the standard options available and how to decipher the part number to configure the specific heater you are ordering. (If there is a size larger or additional options needed, you will have to go through the Non-Standard Process for a quote.)

Notes: 1. Please see the installation instructions for installation details and restrictions. 2. For slip in heaters being installed into an internally insulated duct, decrease the height by 2 times the insulation thickness, decrease the width by the insulation thickness, and add a recess equal to the insulation thickness. 3. All heaters will require either a fan relay or an airflow switch per UL requirements. If neither is chosen, a fan relay will be specified.If both a fan relay and airflow switch are required, both must be specified as options/accessories.4. Power fusing is standard on all heaters above 48.0 amps. Power fusing must be specified as an option/accessory if required for heaters rated 48 amps or less.
