THERMAZONE THIN SERIES - INDUSTRIAL/COMMERCIAL/RESIDENTIAL INFRARED HEATER

THERMAZONE THIN SERIES ARCHITECT'S AND ENGINEER'S SPECIFICATIONS*

The electric infrared heater shall be ThermazoneThin as manufactured by BBC Industries, Pacific, MO. The construction and design shall permit it to be ceiling or wall mounted, with the use of the mounting brackets supplied, or chain hung according to supplied instructions. Heaters shall include the features listed below.

HEATING ASSEMBLY: The heating assembly shall be cULus listed under standard 2021 and shall consist of single stranded, non-coiled Ni-Chrome wire embedded in vitrified ceramic fiber and backed with high density, low biopersistent Fiberfrax insulation. The emitting surface is covered with a black-coated high temperature fiberglass cloth.

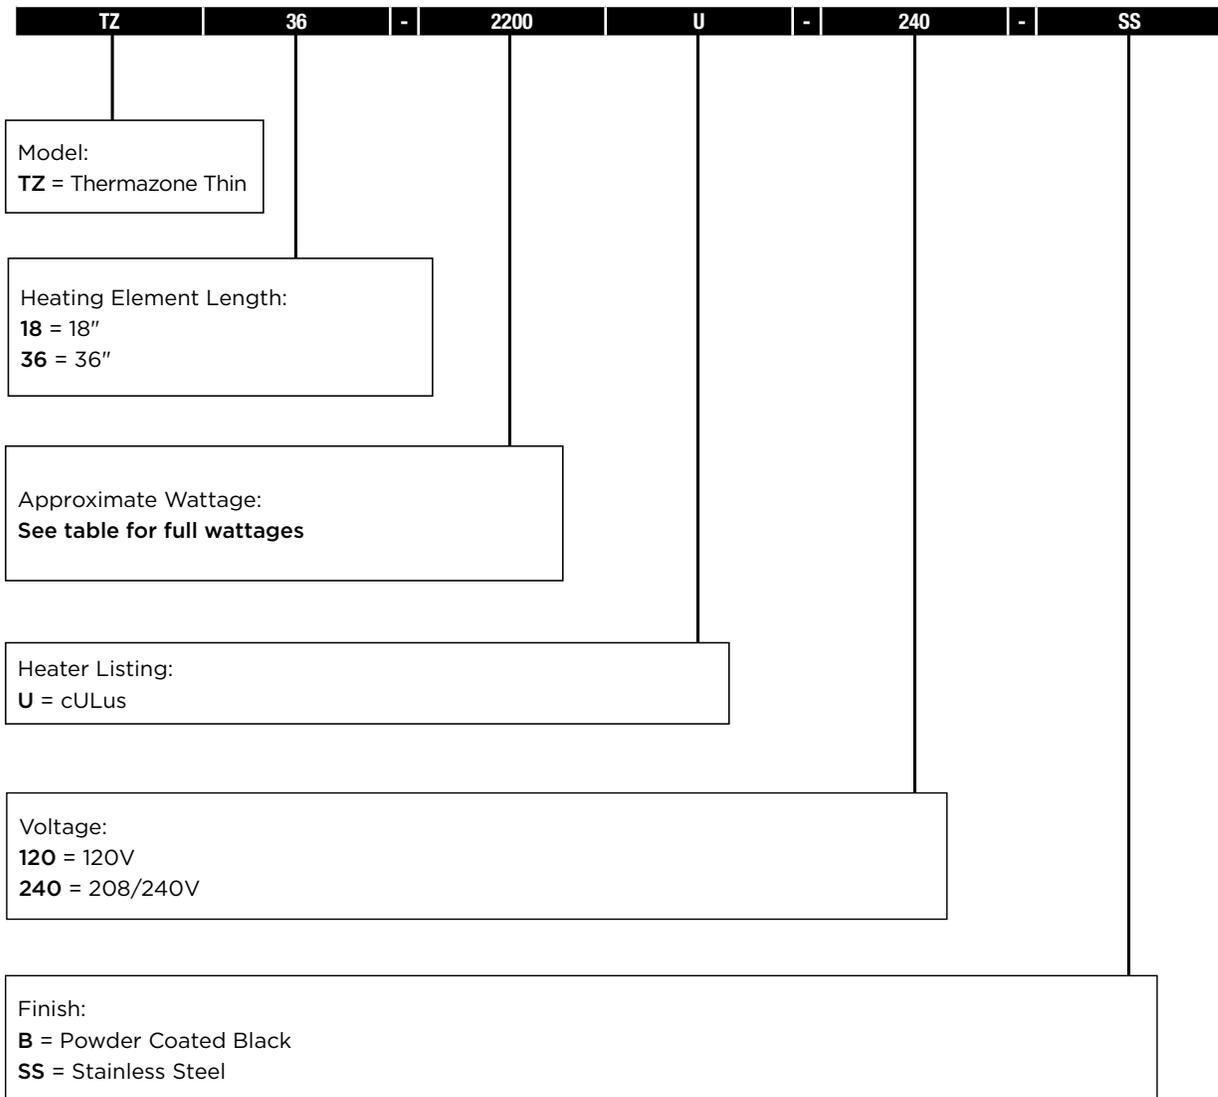

WIRING: For connection to the power supply, Thermazone heaters will include an indoor/outdoor rate j-box mounted to the heater's raceway.

CONSTRUCTION: The heaters are formed and fastened together out of 16 ga. and 20 ga. CRS or stainless steel. If CRS, the heater must be powder coated with a high temp black finish. Unit may include a Stainless Steel grid on the face of the heater.

INSTALLATION:

All wiring to this equipment must be connected to the electrical source in strict accordance with National Electrical Code (N. E. C.), Canadian Electrical Code (C.E.C.), international and/or any local codes having jurisdiction.

FOR WALL MOUNTING:

⚠ Do not install the section closer than:

- 6-7/8 inches below a horizontal surface
- 12 inches to an adjacent vertical surface
- 36 inches to another heater
- 6 feet from the floor

For angle positioning, the heater should not be directed toward any vertical surface closer than 6 feet.

The heater is to be mounted horizontally.

IMPORTANT: For Wall-Mounted heaters, insert the positioning bolts through the slots on both sides of the mounting bracket. **DO NOT USE** the ceiling mounting hole when mounting a heater on a wall.

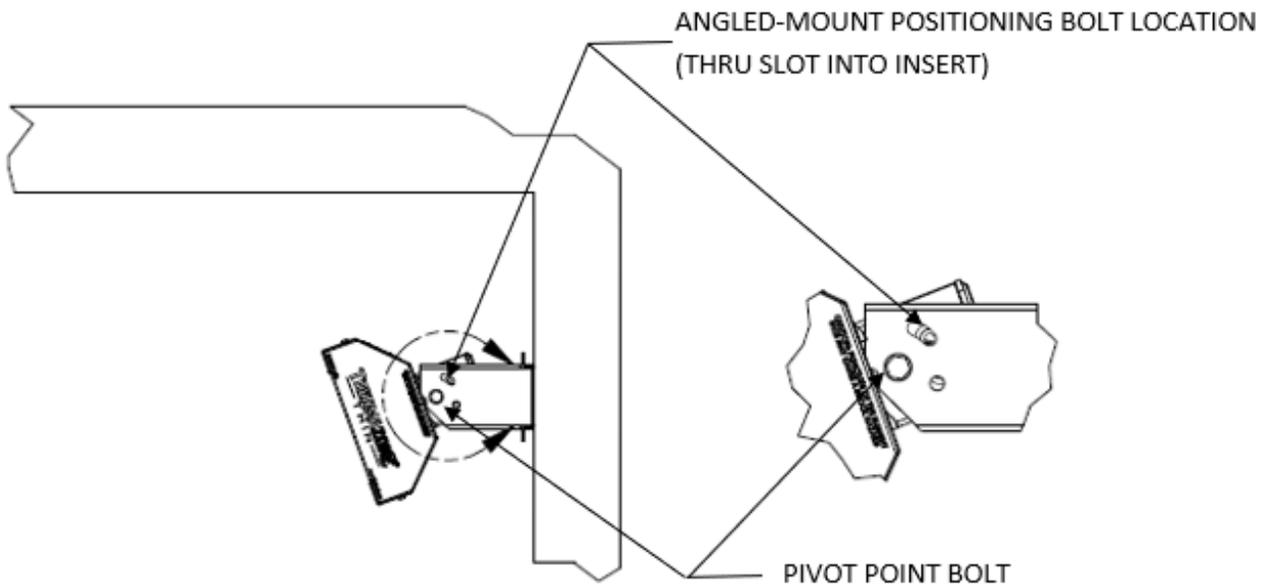

Fig. 1 – ANGLED POSITIONING FOR WALL MOUNTING

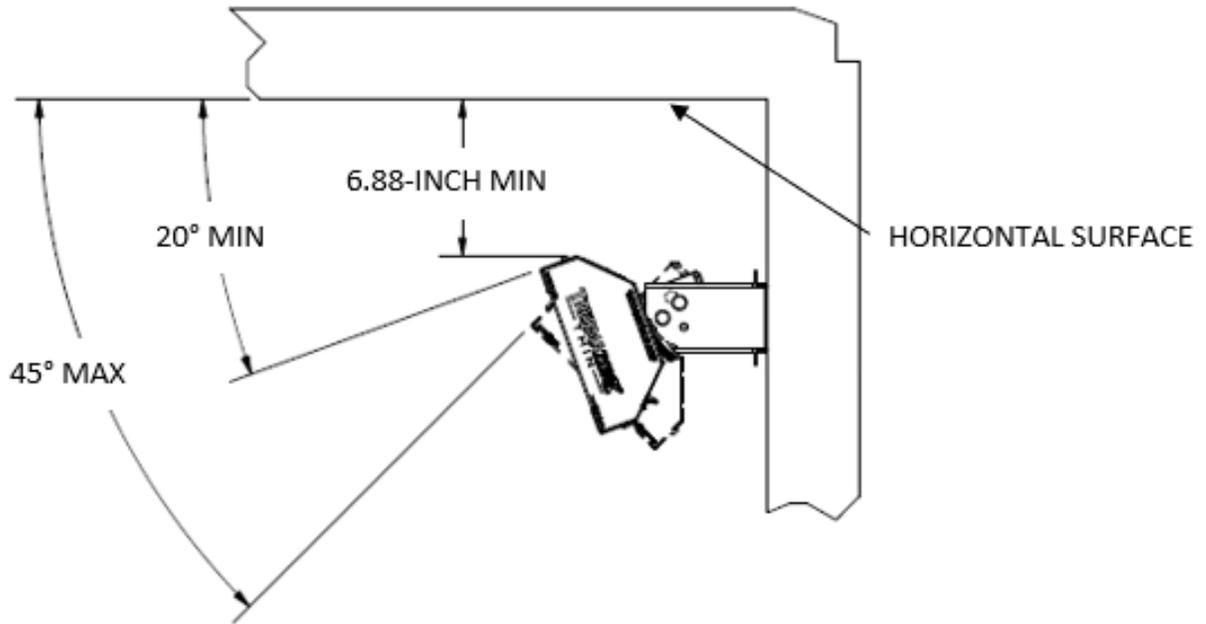

Fig. 2a – WALL MOUNTING

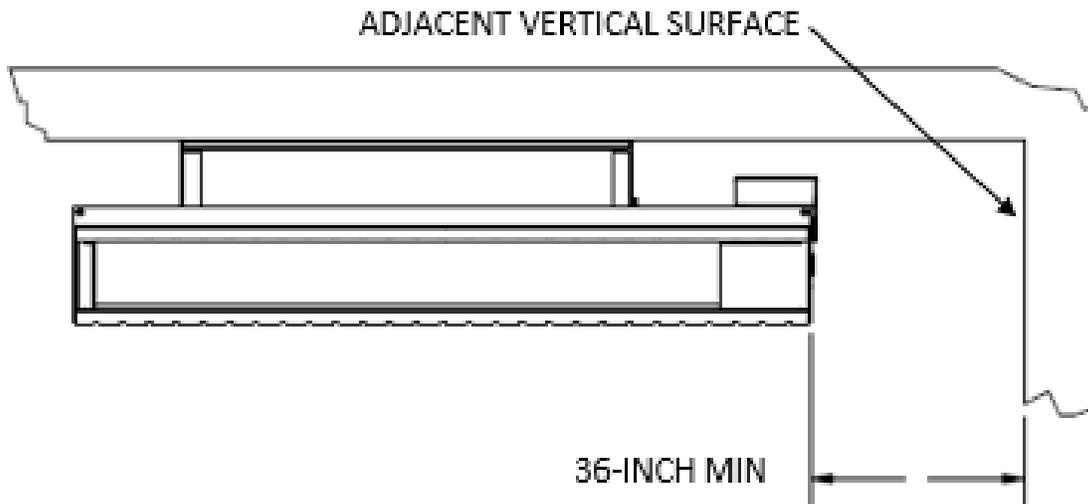

Fig. 2b – WALL MOUNTING

Once the heater is mounted to the wall, position the heater to the desired angle between 20° and 45° downward from the horizontal, limited by the slot length. Tighten the two positioning bolts to secure the heater.

WARNING! Risk of fire. Do not position any heater at an angle not allowed by the slotted hole (20°-45°).

FOR CEILING MOUNTING:

⚠ Do not install the section closer than:

- 36 inches to a vertical surface for vertical mounting
- 6-7/8 inches to a vertical surface for angled ceiling mounting
- 12 inches to an adjacent vertical surface
- 36 inches to another heater
- 6 feet from the floor

Ceiling mounted heaters can be mounted either through the Angled-Mount Positioning Bolt Location or the Ceiling-Mount Only Positioning Bolt Location.

FOR PROTECTED AREA MOUNTING:

A Protected Area is defined as “Located in an area that is partially protected from the effects of weathering.” Typical protected areas would be the underside of a pavilion with a roof, garage port, and the like.

FOR PROTECTED AREA WALL MOUNTING:

Adhere to all requirements for Wall Mounting listed above. Additionally:
Do not install the section closer than 12 inches to edge of overhang of roof and no more than 8.25 inches (to top of bracket) below the edge.
The heater needs to be installed in a position such that it is protected from rain, snow, and similar outdoor wet areas.

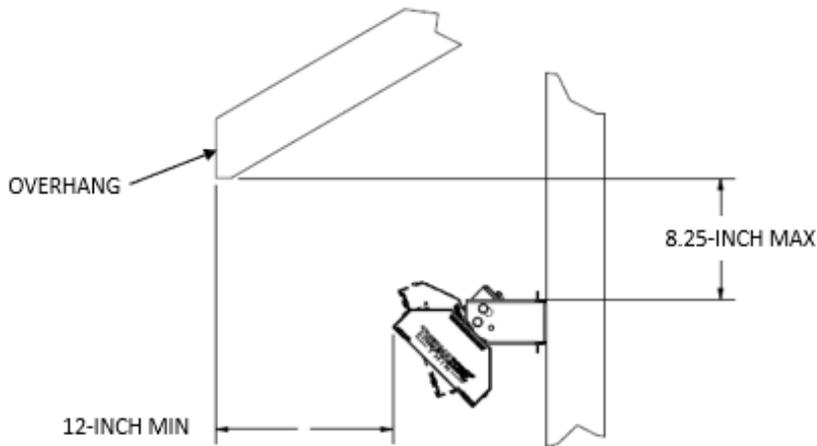

Fig. 7 – PROTECTED AREA WALL MOUNTING

FOR PROTECTED AREA CEILING MOUNTING:

Adhere to all requirements for Ceiling Mounting listed above. Additionally:
Do not install the section closer than 12 inches to edge of overhang of roof.
The heater needs to be installed in a position such that it is protected from rain, snow, and similar outdoor wet areas.
